

WHAT ENGINEERING SCHOOL DIDN'T TEACH YOU

- There are about 10 types of capacitors.
- Theory tells you how a circuit works, not why it doesn't work.
- Not everything works according to the specs in the data-book.
- Anything practical you learn will be obsolete before you use it, except the complex math, which you will never use.
- Always try to fix the hardware with the software.
- Engineering is like having an 8 a.m. class and late afternoon lab every day for the rest of your life.
- Overtime pay? What overtime pay?
- Engineers rule the world until the next revision.
- If you like junk food, caffeine, and all-nighters, then you should go into architecture.
- Dilbert is a documentary. 📺
