

Engineers and scientists will never make as much money as business executives, and here is proof:

Postulate 1: Knowledge is Power

Postulate 2: Time is Money.

As every engineer knows,

$\text{Work/Time} = \text{Power}$

Since  $\text{Knowledge} = \text{Power}$ , and  $\text{Time} = \text{Money}$ , we have:

$\text{Work/Money} = \text{Knowledge}$

Solving for Money, we get:

$\text{Work/Knowledge} = \text{Money}$

Thus, as Knowledge approaches zero, Money approaches infinity, regardless of the Work done.

Conclusion: The less you know, the more you make.
